# MHC $\Pi$ (DR $\alpha$ chain)

# Recombinant Rabbit Monoclonal Antibody Catalog# BX50192

Product Datasheet Clone# BP6170

**Predicted Molecular Wt:** 29kDa **Purity:** ProA affinity purified IgG

Species Cross-reactivity:HumanForm: LiquidApplications:IHC-PSwissprot ID: P01903

## **Background:**

Major histocompatibility complex class II (MHC class II) molecules are heterodimeric, transmembrane glycoproteins expressed on the surface of antigen-presenting cells such as macrophages, dendritic cells, and B cells. Expression can also be induced on other cell types through interferon-γ signaling. Prior to being displayed on the cell membrane, MHC class II molecules are loaded with exogenous peptide antigens approximately 15-24 amino acids in length that were derived from endocytosed extracellular proteins digested in the lysosome. Antigen-presentation through MHC class II is required for T cell activation during the immune response to extracellular pathogens. In humans, the MHC class II protein complex is encoded by the human leukocyte antigen gene complex (HLA).

#### **Subcellular location:**

Membrane

#### **Recommended method:**

Heat induced epitope retrieval with Tris-EDTA buffer (pH 9.0), primary antibody incubate at RT (18°C-25°C) for 30 minutes.

## Immunogen:

Synthetic peptide near N-terminal residues in Human MHC  $\Pi$ (DR  $\alpha$  chain) was used as an immunogen.

#### **Storage Buffer:**

PBS 59%, Sodium azide 0.01%, Glycerol 40%, BSA 0.05%.

# Storage conditions:

-20°C

# **Storage instructions:**

Shipped on blue ice. Upon delivery, aliquot, and store at -20°C. Avoid freeze / thaw cycles.

# **Recommended Dilutions:**

IHC-P: 1:100-1:200

# **Background References:**
